Lyle,

On the heels of Wi-Fiber's BEST OF SHOW award at CES, our revolutionary Intelli-Platform™ has garnered the attention of law enforcement offices as a rapid **Force Multiplier** at a fraction of the price of additional new hires. Our device, a straight replacement to traditional street lamps, incorporates high speed wireless connectivity and surveillance which includes:

- 4K cameras with facial recognition & LPR
- Microphones
- Two way speakers
- Gunshot and glass-break sensors

Best of all, with built in wireless connectivity, power is the only requirement - allowing your team to install our device on any and every street corner with no additional internet or power lines.

When could you accommodate a 30 minute window to discuss our core capabilities and the most cost effective force multiplier available?
